

Connect Everything

Connects devices and applications to an existing Dante network

Routes audio from devices and applications to one another

Discovers all connected audio devices and applications

Up to 16 channels of audio per application

Works on Windows and Mac computers

Dante Via is powerful software that enables flexible routing of multi-channel computer-based audio, allowing audio applications and devices to be networked and interconnected, easily and inexpensively.

Expand your Dante Network

Dante Via enhances any USB or FireWire audio device with network connectivity, allowing you to easily expand your Dante system with hundreds of readily available products. Simply connect your device and check “Enable Dante” in the Dante Via interface, and it’s instantly integrated with your Dante network, unrestrained by ‘point-to-point’ cable runs.

Route your applications

Dante Via isolates and routes audio from individual applications, allowing multi-channel audio connections between devices and applications on the same computer as well as to Dante devices and computers anywhere on the network. Unwanted system sounds are easily eliminated, and each application has its own independent channels.

Applications

Enable overflow rooms easily with only a laptop computer, a connected loudspeaker and lightweight Ethernet cable

Share presentation audio by connecting software directly to an audio network in an auditorium

Extend the reach of USB and FireWire devices up to 300 feet (100m) using an ad hoc network comprised of only computers running Dante Via

Record important calls directly from applications such as Skype, FaceTime or Lync

Create a background music system that is unpolluted by system sounds

Record multi-channel audio from music creation applications using a single computer

Monitor Dante channels

Use Dante Via to connect local headphones or speakers directly to a Dante network, so you can easily monitor Dante devices and channels from anywhere on the system with no need for dedicated hardware.

Powerful and Intuitive User Interface

Dante Via's easy-to-use interface allows you to see at a glance what's playing on your computer and what devices are transmitting to the network. Routing an audio source to a destination is as simple as drag & drop - you can even drag multiple sources to a destination to append channels or create an instant stereo mix.

Specifications

Operating system

Windows 10 or Windows 11

Audio Application

Audio applications must support either ASIO or WDM

macOS

Audio Application

Any audio application using the standard Core Audio interface to a sound card CPU x86_64 and Apple Silicon

Network

100/1000 Mbps Ethernet

Software time-stamping, supporting sample-accurate playback

Automatic discovery of local and network devices

Audio Interface

Up to 32 x 32 channels from connected audio hardware devices

Up to 16 x 16 channels per audio application

Up to 48 x 48 channels total I/O

48 kHz sample rate

24-bit sample depth

Supports Core Audio, ASIO and WDM interfaces

Control Interfaces

Drag and drop UI for easy signal routing

Secure publishing of applications or devices to be shared on network

Compatible with Dante Controller for advanced routing
